ACKNOWLEDGEMENTS

Credit is due Mr. Gary Jackson, U.S. Naval Sea Systems, for supplying the research materials and inflation data used to update Army watercraft costs. The author wishes to thank the Kansas City Regional Office, U.S. Department of Labor, Bureau of Labor Statistics, for special assistance with wage and price data.

I. APPLICABILITY.

The inflation indices and factors in this report have been developed for use in the adjustment of historical costs for U.S. Army troop support items, and are covered under the Other Procurement, Army appropriation. Due to the multiplicity of troop support items, the justification for the selection and use of any index not covered by the schedule listed in Section II of this document is the user's responsibility.

SECTION II

An Overview of Inflation Indices for Troop Support Work

II. AN OVERVIEW OF INFLATION INDICES FOR TROOP SUPPORT WORK.

A. Introduction.

Historical indices are a convenient device for translating the price of an item procured in the past to what the "replacement price" of the item would be today. Several questions, however, should be asked when using an index to update past procurement prices:

1. Is the item for which an updated price is to be calculated obsolete due to changes in technology? Theoretically, prices for WWII vintage equipment can be "updated". However, it should be obvious that this is not a reasonable procedure. To calculate the replacement price for obsolete equipment, a special cost study rather than the application of a numerical index, is required.
2. Is the item under consideration made of the same materials and by the same manufacturing process as when last procured? If the manufacturer has substituted nylon parts for metal parts without loss of performance, or now assembles or packages the item by machine and has significantly lowered his costs, the replacement price for the item could be lower than the index would indicate.
3. Are the conditions of the replacement procurement, if undertaken, identical to past procurement(s)? For instance, are the quantities to be purchased in the old and new procurements similar?
4. Is the index appropriate for use with the item at hand? An index is developed by tracking price changes for a group of items over time. Whether or not a specific index is used for an item depends on whether the item belongs to that group being indexed, and whether it receives adequate representation in the group. For example, aluminum metal items are not accurately tracked using Code 10, Metals and Metal Products, which experienced an inflation rate of 3.7% for FY 84. Rather Code 10-2, Non-Ferrous Metals, is more appropriate because it contains numerous aluminum shapes, forgings, and semi-finished items. Aluminum items have experienced more rapid cost growth than the general group of metal items. Non-ferrous Metals averaged an 6.4% increase in FY 84, as compared to the 3.7% overall average for Metals and Metal Products.

B. Source of Data and Explanation of Codes:

The data used to produce the fiscal year historical inflation indices is supplied by the Kansas City Regional Office, Bureau of Labor Statistics, U.S. Department of Labor. The term PPI code is merely an abbreviation for Producer Price Index code, formerly called the Wholesale Price Index code. The name was changed because raw materials and semi-finished goods are included in the index, not just finished goods at the wholesale level. Producer Price Index codes are two to eight digits in length. The more digits a code has, the more narrowly defined the index is. For example:

PPI Code 11 is Machinery and Equipment

---- a subcategory of Code 11 is:

PPI Code 11-7, Electrical Machinery and Equipment

---- a further refinement is:

PPI Code 11-73, Motors, Generators, and Motor Generator Sets

---- a subcategory of this is:

PPI Code 11-7302, Generators and Generator Sets

---- and a final subcategory of this subcategory:

PPI Code 11-730224, Generator, A.C. 30 Kilowatt

---- which is a single, well defined item.

Because a single PPI code may be used to track a number of similar items, most codes used for troop support work are two, three, or at most four digit codes. A list of the general two digit codes in the Producer's Price Index is presented below. The fifteen PPI codes cover the majority of the items produced and consumed by the U.S. economy.

PRODUCER PRICE INDEX CODES AT THE AGGREGATE LEVEL.

<u>PPI CODE</u>	<u>TITLE</u>
01	Farm Products
02	Processed Foods and Feeds
03	Textile Products and Apparel
04	Hides, Skins, and Related Products
05	Fuel and Related Products and Power
06	Chemicals and Allied Products
07	Rubber and Plastic Products
08	Lumber and Wood Products
09	Pulp, Paper, and Allied Products
10	Metals and Metal Products
11	Machinery and Equipment
12	Furniture and Household Durables
13	Non-metallic Mineral Products
14	Transportation Equipment
15	Miscellaneous Products

A list of Producer Price Index codes and the Troop Support Items with which they have been traditionally associated with at TROSCOM is included Section III of this document.

C. Producer Price Indices used in Troop Support Work.

From a review of documents which span the past 12 years, it was determined that as many as 103 Producer Price Index codes were considered for and/or used in troop support work. A number of these indices were used for Economic Price Adjustment (EPA) contracts, in which contractual obligations are adjusted according to the movement of specialized price indices written into the procurement contract. Most of the remainder are two, three, and four digit codes, similar to those listed in Section III currently used for troop support items.

In order to make updating past prices a manageable exercise, the number of inflation indices had to be reduced significantly. In the early 1970's the set of 103 was reduced to ten, nine specific and one general. These indices are listed on p. 8, and follow on pp. 9-18.

The indexing technique used is called indexing by similarity. Most troop support items have some similar counterpart in private industry. Army heating and air conditioning equipment, compressors, and generators, for example, are similar in nature to commercial equipment. Often a manufacturer may make both military and commercial equipment at the same location. Due to the thousands of troop support items purchased over the years, the most similar index from the basic set of ten Producer Price Indices (PPI's) is used as a proxy.

D. Output Generated by the Computer Program:

Data provided by the Bureau of Labor Statistics is in monthly, calendar year format. The computer program does the following:

(1) Rearranges and prints the monthly index in fiscal year format, including FY 76/7T, as prescribed by Higher Headquarters.

(2) Computes and prints fiscal year averages for the indices, with calendar year 1967 as base year.

(3) Inverts the index, computes, and prints fiscal year factors which can be used to move a price paid for an item in the past to its approximate price in the current time period.

For example, if the fiscal year factors for FY 78 to FY 84 are the following:

<u>Year</u>	<u>Factor</u>
FY 84	1.00
FY 83	1.08
FY 82	1.18
FY 81	1.27
FY 80	1.36
FY 79	1.49
FY 78	1.57

....to update the price paid for an item in FY 78 so that it reflects what would be paid for the same item in FY 84, multiply by 1.57. The fiscal year factors are a convenience provided to the user, and allow any past price to be brought up to date with one multiplication.

E. Additional Publications Concerning Inflation

Among the documents available from this office are:

- (1) The AMC Historical Inflation Report.
- (2) "The AMC Inflation Guidance Package."
- (3) "General Guidance for PRIMIR Submissions."
- (4) Handbook of Army Cost Analysis Terms
- (5) The Historical Research and Development Inflation Indices for U.S. Army Troop Support Items.
- (6) Inflation Indices, An Introduction to Basic Theory and Their Application, with Sample Problems.
- (7) Methodology for Updating Army Materiel Plan (AMP) Cost Estimates.
- (8) The Standard Army Inflation Methodology. (SAIM)
- (9) "The U.S. Cost Forecasting Service Near Term Review."

SECTION III

Computer Generated Inflation Indices

PPI CODES AND ASSOCIATED TROSCOM ITEMS

The following Producer Price Indexes have been associated with the corresponding TROSCOM OPA items for a considerable period of time, and have been used to estimate current prices based on past procurement prices:

<u>Producer Price Index Title and Code</u>	<u>TROSCOM OPA Item</u>
Rubber and Plastic Products PPI Code 07	Collapsible Tanks
Heating Equipment PPI Code 10-6	Air Conditioners Heaters
Fabricated Structural Metal Products PPI Code 10-7	AVL Bridge (Not including Tanks chassis) Tanks Other Bridges
Machinery and Equipment PPI Code 11	Power Plant (MUST) Firefighting Equipment Forklift Trucks
Construction Machinery and Equipment PPI Code 11-2	Pumps Compressors
Watercraft/Small Ships Index provided to TROSCOM by US Naval Sea Systems	Watercraft
Special Industry Machinery and Equipment PPI Code 11-6	Theodolites Tape Equipment Surveying Instruments
Electrical Machinery Equipment PPI Code 11-7	Generators Light Sets Utility Elements
Railroad Equipment PPI Code 14-4	Railroad Equipment
Industrial Commodities Average of PPI Codes 03 through 15.	All other items Not Included in the above.
